Making connections to create networks happens one segment at a time. The Town of Colchester had a crucial missing link in its extensive bicycle facility network. The pre-project roadway conditions along West Lakeshore Drive, with no sidewalks, no roadway shoulders, and a sight-restricted horizontal curve, were extremely dangerous for cyclists and pedestrians. At the same time, this segment represented a desirable connection between the neighborhoods in the western part of Colchester and Malletts Bay.

- Utilizing infiltration trenches created a stormwater system that will be easy to maintain.
- Simplifying the stormwater system saved the Town nearly $200K.
- Worked with Town and 20 property owners to gain an easement for construction.
- Construction process was completed on-time and without claims.
- Provided a safe facility for bicycles and pedestrians.
- Promotes a healthy and active lifestyle to the area.
